Cloud Services

24/7 Cloud Threat Detection and Response

Secure cloud workloads, data, apps, and access from the latest advanced threats and vulnerabilities. Sophos Cloud Security fuses cloud native technologies with integrated managed threat detection and response services to provide the 24/7 protection, monitoring, and response organizations need to move fast and stay secure in the cloud. Sophos is trusted by millions of users to provide powerful and effective cybersecurity solutions that are specifically designed to be accessible and manageable for any organization. Available in a single, unified management console, Sophos Central, Sophos threat protection, monitoring, and response solutions provide protection of on-premises and cloud environments from the latest advanced threats and vulnerabilities. Accelerate your business and protect cloud investments with Sophos cloud native protection, covering Amazon Web Services, Microsoft Azure, Google Cloud Platform, Oracle Cloud Infrastructure, Kubernetes clusters, container registries, and Infrastructure-as-Code environments from the latest threats and vulnerabilities while optimizing cloud resource spend.

The Weight of Cloud Security

Deploy and managed Sophos protection with an in-house IT security team, or connect with experienced Sophos Cloud Security Provider partners around the world.

Our flexible approach means optimizing security and compliance posture, keeping data secure and private while blocking advanced threats are goals you can easily achieve. Accelerate your business and ensure security enables cloud transformation with the world's most trusted cloud cybersecurity platform, combining advanced protection for SaaS and IaaS public cloud deployments.

Implementing Tools to Secure Your Business

These tools will help secure your business from cyberattacks, if you follow them correctly.

- 1. Strict Password Policies/Management Tools** - Strict password policies and the use of proper password management solutions can help improve your organization's overall password hygiene. It is, in a way, the first line of protection against cybercriminals.
- 2. Strong Identity Controls - Multifactor Authentication (MFA)** to combat the current threat landscape, strong identity controls that go beyond traditional username-password authentication are required. Consider using Multifactor authentication, which includes features such as one-time passwords (OTPs) and security questions.
- 3. Regular Risk Assessment** - This process aids in the detection, estimation and prioritization of risks to an organization's people, assets and operations.
- 4. Virtual Private Network (VPN)** - To avoid a security breach, you should set up a corporate VPN that encrypts all your connections. Make sure your employees test it in their respective locations to avoid any hassles.
- 5. Business Continuity Strategy** - When disaster hits, a solid business continuity strategy ensures that mission-critical operations continue uninterrupted and that IT systems, software and applications remain accessible and recoverable.
- 6. Continual Security Awareness Training** - Continuous security training empowers your employees to recognize complex cyberthreats and take appropriate action, resulting in a transformative security culture within your organization.

Cybersecurity Vigilance

Employee training- Providing continual security awareness training to your employees enables them to identify threats and vulnerabilities. It enhances employees' defensive abilities and prepares them to effectively deal with a crisis.

Stay current with technological advances and the threat landscape- It's crucial to keep up with the latest technology developments and threats. If you have no understanding of what you're up against, you can't protect your business.

Reset your security systems- Regularly audit your digital and physical systems to identify vulnerabilities. Set the critical systems to their best available configurations to prevent unauthorized access.

Adopt advanced technologies- Legacy technologies may be ineffective in dealing with today's challenges. As a result, having the most up-to-date and effective technologies and tools to secure your organization is critical.

Partner with an MSSP- Resiliency is no longer a choice but a necessity. However, it requires a significant amount of time, effort and expertise. It's always best to collaborate with an expert partner like us who can handle all resiliency and technology matters for you.

TECH TIMES

"As a business owner, you don't have time to waste on technical and operational issues. That's where we shine! Call us and put an end to your IT security finally and forever!" - **Jon Cooper, CEO** | Total Secure Technology | 916.696.7200 | jcooper@totalsecuretech.com
